

Contents

1. Introduction	1
1.1 Introduction	1
1.2 Feedback	2
1.3 Simple Forms of Feedback	3
1.4 How the PID Controller Developed	5
1.5 Technology Changes and Knowledge Transfer	7
1.6 Outline of the Contents of the Book	8
1.7 Summary	10
1.8 Notes and References	10
2. Process Models	12
2.1 Introduction	12
2.2 Static Models	13
2.3 Dynamic Models	14
2.4 Feature-Based Models	23
2.5 Typical Process Models	28
2.6 Models for Disturbances	44
2.7 How to Obtain the Models	47
2.8 Model Reduction	56
2.9 Summary	61
2.10 Notes and References	62
3. PID Control	64
3.1 Introduction	64
3.2 The PID Controller	64
3.3 Filtering the Derivative	73
3.4 Set-Point Weighting	74
3.5 Integrator Windup	76
3.6 When Can PID Control Be Used?	87
3.7 Summary	92
3.8 Notes and References	93
4. Controller Design	95
4.1 Introduction	95
4.2 A Rich Variety of Control Problems	96
4.3 Feedback Fundamentals	96
4.4 Stability	102

Contents

4.5	Closed-Loop Poles and Zeros	109
4.6	The Sensitivity Functions	111
4.7	Robustness to Process Variations	118
4.8	Quantifying the Requirements	122
4.9	Classical Specifications	128
4.10	Summary	136
4.11	Notes and References	137
5.	Feedforward Design	139
5.1	Introduction	139
5.2	Improved Set-Point Response	139
5.3	Set-Point Weighting	145
5.4	Neutral Feedforward	146
5.5	Fast Set-Point Response	150
5.6	Disturbance Attenuation	154
5.7	Summary	156
5.8	Notes and References	157
6.	PID Design	158
6.1	Introduction	158
6.2	Ziegler-Nichols and Related Methods	159
6.3	Rule-Based Empirical Tuning	169
6.4	Pole Placement	174
6.5	Lambda Tuning	186
6.6	Algebraic Design	189
6.7	Optimization Methods	196
6.8	Robust Loop Shaping	206
6.9	Summary	221
6.10	Notes and References	222
7.	A Ziegler-Nichols Replacement	225
7.1	Introduction	225
7.2	The Test Batch	226
7.3	PI Control	228
7.4	PID Control	230
7.5	Frequency Response Methods	238
7.6	PID Control Based on Second-Order Model	242
7.7	Comparison of the Methods	247
7.8	Measurement Noise and Filtering	251
7.9	Detuning	253
7.10	Summary	262
7.11	Notes and References	265
8.	Predictive Control	266
8.1	Introduction	266
8.2	The Smith Predictor	267
8.3	Analysis of Smith Predictor Control	271
8.4	The PPI Controller	279
8.5	Predictors for Integrating Processes	283
8.6	Model Predictive Control	285
8.7	Summary	291

8.8	Notes and References	292
9.	Automatic Tuning and Adaptation	293
9.1	Introduction	293
9.2	Process Knowledge	294
9.3	Adaptive Techniques	295
9.4	Model-Based Methods	298
9.5	Rule-Based Methods	302
9.6	Supervision of Adaptive Controllers	304
9.7	Iterative Feedback Tuning	313
9.8	Commercial Products	316
9.9	Summary	327
9.10	Notes and References	327
10.	Loop and Performance Assessment	329
10.1	Introduction	329
10.2	Valves	329
10.3	Loop Assessment	334
10.4	Performance Assessment	336
10.5	Integrated Tuning and Diagnosis	344
10.6	Summary	345
10.7	Notes and References	346
11.	Interaction	347
11.1	Introduction	347
11.2	Interaction of Simple Loops	347
11.3	Decoupling	354
11.4	Parallel Systems	360
11.5	Summary	364
11.6	Notes and References	365
12.	Control Paradigms	366
12.1	Introduction	366
12.2	Bottom-Up and Top-Down Approaches	367
12.3	Repetitive Control	368
12.4	Cascade Control	373
12.5	Mid-Range and Split-Range Control	378
12.6	Nonlinear Elements	381
12.7	Neural Network Control	389
12.8	Fuzzy Control	392
12.9	System Structuring	398
12.10	Summary	404
12.11	Notes and References	406
13.	Implementation	407
13.1	Introduction	407
13.2	Analog Implementations	408
13.3	Computer Implementations	412
13.4	Velocity Algorithms	420
13.5	Operational Aspects	423
13.6	Controller Outputs	427
13.7	Summary	431

Contents

13.8 Notes and References	432
Bibliography	433
Index	456
